

NILESH CHIDAMBARAM

Software Developer · IT Graduate · Mumbai, India
nileshchidambaram9869@gmail.com | +91 8452049424 | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFILE

B.Sc. IT graduate skilled in React, Next.js, and Python, with hands-on experience building full-stack web applications, integrating REST APIs and Generative AI (LLM) features, and developing ML-based classification systems. Comfortable working in Agile, two-person engineering teams from data preparation through testing and documentation.

EXPERIENCE

AI Variant — AI/ML Intern

Mumbai, India | Nov 2025

- Co-developed a Real-Time Intrusion Detection System, contributing to data preparation, model experimentation, and testing within a 2-person Agile team.
- Applied anomaly-detection techniques and ML workflows, using AI-assisted development tools to accelerate iteration.

PROJECTS

Note-Sync — Real-Time Collaborative Editor | [Github](#)

React · Next.js · Tailwind CSS · TipTap · Liveblocks · Convex · Clerk · Gemini AI · Tesseract.js

- Built a full-stack collaborative rich-text editor with live cursors and threaded comments, using Liveblocks WebSocket architecture.
- Integrated Google Gemini AI via REST API for a Generative AI writing assistant supporting summarize, rewrite, and expand actions, plus a context-aware LLM chat assistant.
- Added in-browser OCR (Tesseract.js) for document text extraction, secured with Clerk authentication and organization-level access control, backed by Convex as the reactive database.

JobLens — Job Application Tracker & Resume Matcher | [Github](#)

Python · OOP · JSON · PyPDF · Matplotlib · Pytest

- Built a Python CLI application for end-to-end job-application tracking, supporting CRUD operations, search, and status updates with persistent JSON storage.
- Developed a resume-matching engine (PyPDF, OOP) that extracts skills from PDF resumes and compares them against job descriptions to flag matched and missing skills.
- Validated core logic with a Pytest unit-test suite and visualized application-pipeline status through a Matplotlib analytics dashboard.

AI-Powered Network Intrusion Detection System | Team Project | [Github](#)

Python · Scapy · River · Gradio · Plotly · FPDF2

- Co-developed a real-time Network Intrusion Detection System with a 2-person team, capturing live network traffic via Scapy and detecting anomalies using River's Half Space Trees online machine learning model with dynamic anomaly scoring.
- Built an interactive Gradio dashboard with real-time Plotly visualizations, protocol distribution analysis, protocol/IP-based packet filtering, a live detection log, and PDF incident-report export via FPDF2.

EDUCATION

Guru Nanak Khalsa College of Science, Arts & Commerce

2023 – 2026

B.Sc. Information Technology · Mumbai, India

CGPA: 6.82/10 (Final Year: 7.98/10)

TECHNICAL SKILLS

Languages: Python, JavaScript

Web: React.js, Next.js, Tailwind CSS, TipTap, HTML, CSS, Responsive Design

AI/ML: ML Workflows, Data Preprocessing, Anomaly Detection, Generative AI / LLM Integration (Gemini AI)

Backend/DB: REST APIs, Convex, MySQL, JSON

Python Libraries: OOP, PyPDF, Matplotlib, Pytest

Tools: Git, GitHub, Liveblocks, Clerk, VS Code, Linux (Ubuntu), Tesseract.js, Tableau

CERTIFICATIONS

- HarvardX — CS50's Introduction to Programming with Python
- IBM SkillsBuild Winter Certification 2025 — Data Analytics & Business Intelligence Lab
- Accenture Developer and Technology Job Simulation — Forage
- Artificial Intelligence & Machine Learning — ExcelR Edtech Pvt. Ltd. (2025)
